

Stabbing Guides

Stabbing guides are comprised of mostly steel cores, and urethane outer shells, complete with handles for guidance and varying types of closures. These guides are used during the time of making up a string of pipe, connecting the pin and box threads, and preventing face damage and/or connection failure. Functioning as a funneled guide for pipe, a stabbing guide is molded to fit the specific dimensions of your thread profile, ensuring that you have proper guidance for connecting pipe.

Specifications

Materials

Urethane, Steel Components

Color

Orange, Blue, Green, Black, Maroon

Features

Prevents damage to pipe threads during make up

Steel core with urethane outer shell

Removable & replaceable handles

Buckle type closure

Available for tubing, casing and drill pipe connections

Available in custom colors, additional fees may apply
