

Drop-in Retrievable Check Valves

Drop-In Retrievable (DIR) Check Valves are a dart type check valve, incorporating a low-pressure soft seal over a high-pressure metal to metal sealing mechanism. This offers extended service life and reliability over ball type checks. The design of our DIR check valves allows high capacity down hole flow while preventing backflow from the well. The DIR tool is easily deployed or retrieved with provided tooling and uses standard wire line connections.

Features

Drop-In check tool is easily deployed and latched with pressure by being pumped down from above

One piece body incorporating a replaceable, field serviceable body liner

Low pressure polymer seal backed by high pressure metal to metal seal, spring energized to ensure positive sealing under any conditions

Easy to use disassembly and remote retrieval tools provided in lockable tool box which houses the Drop-In check
NACE trim

Available in a wide variety of sizes and end connections

Reliable, field proven, serviceable design
