

Tubing Safety Valves

Canam's line of high-performance safety valves are used by the well service industry to prevent fluid loss and as a protection against well pressure fluctuations. Our unique design allows for positive sealing under load in gas environments, making these valves the superior choice for snubbing applications as well.

Features

Full drift

Positive, gas tight sealing in both directions

High torque body connection ensures seamless operation in the toughest conditions

Low torque operation even when closing or opening under maximum bore pressure

Gas tight stem seal even under maximum pull

Full NACE compliant

Available with a wide variety of sizes and end connections

Reliable, field proven, serviceable design
