

Mesh hats, gaskets and bolts kits to complete your tank relief vent installation.

### Mesh hats

These mesh hats fit on the Marsh Hawk body to keep debris and wildlife out of the deep-set hatch cavity. Made from stainless steel woven mesh, they are manufactured to snap onto the top of the Marsh Hawk, and require no additional installation tools. The mesh itself has a negligible impact on the venting performance of the Marsh Hawk.

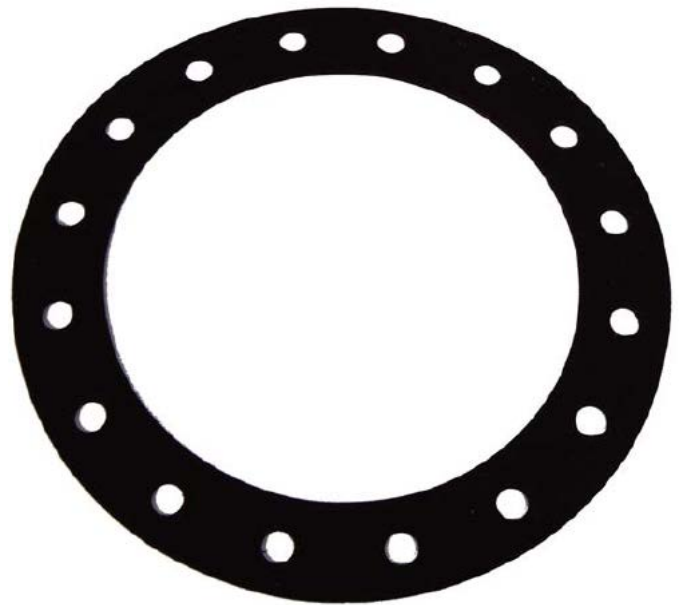

### Tank Gaskets

We provide standard neoprene gaskets that seal between the tank and the Marsh Hawk or TVTH. The standard gasket conforms to the 8" API 12B/F Thief Hatch bolting pattern, although other sizes may be available. Contact us for more information.

**Below:** Standard 8" API tank gasket for Marsh Hawk and model 200 & 300 TVTH.

### De-icing System

An optional de-icing system is available that allows direct injection of a seal-appropriate de-icing solution onto the internals of the Marsh Hawk from ground level. The de-icing system is available as just the nozzle and hose assembly, or complete with a hand pump and quick connections.

### Bolt Kit

This bolt kit includes sixteen 1/2 UNC bolts and nuts for fixing your Marsh Hawk, TVTH, adapter spool or pipe-away to your tank. Included with the Marsh Hawk, the bolt kit is sold separately from the Model 200 and 300 TVTH, spools, risers and pipe-aways.
